

INSTRUCTIONS FOR USE

YouVeeShield protects hands and feet. Below are illustrations that show where to place your fingers during a manicure or toes during a pedicure. For use on the other hand or foot, turn over the Shield. One size.

1. Put on YouVeeShield right before applying the gel polish. They should fit neatly below the cuticle on the hand and slightly lower on the foot. *Place the thumb first when using on the hands.*
2. If the Shield feels tight, gently stretch the material for more comfort.
3. Keep the Shield in place for the duration of the gel applications and curing process.
4. Dispose of the Shield after use.

TIP – SINGLE NAIL REPAIR: If you need to repair just one nail, you can use the Shield to expose just that nail and cover the others so they are not further affected by the curing lamps.

PRODUCT INFO

YouVeeShield is a .003 inch shield made from a thermoplastic elastomer that effectively blocks 99.9% of the UV Light. This unique elastomer material is soft and comfortable to wear during your service. Its high elasticity without tearing provides a perfect fit for all. Made in the USA, the Shields are distributed exclusively by YouVeeShield, LLC. Patent pending.
